

Supplemental Table

Table 1S Time-dependent adjustments for the use of anticoagulant drug.

Time-dependent confounder (n = 3563)	Hazard ratio (95% CI)	P-value
Primary outcome*	0.55 (0.45–0.67)	< 0.001
Secondary outcome		
Ischemic stroke/Systemic embolism	0.63 (0.49–0.82)	< 0.001
Cardiovascular hospitalization	1.03 (0.91–1.16)	0.689
Cardiovascular mortality	0.31 (0.20–0.48)	< 0.001
All-cause mortality	0.44 (0.33–0.59)	< 0.001
Atrial fibrillation recurrence	0.38 (0.34–0.41)	< 0.001

*Refers to the cumulative event of all-cause mortality or ischemic stroke/systemic embolism.
